MEMORANDUM FOR SEE DISTRIBUTION

SUBJECT: FY07 Performance-Based Acquisitions (PBA) Candidates

1. References:

- a. Army Environmental Cleanup Strategy, April 2003.
- b. Army Environmental Cleanup Strategic Plan, January 2005.

2. This memorandum announces the FY07 list of candidates for potential participation in the Performance-Based Acquisitions (PBA) initiative (enclosure). The Army will expand its FY07 activities based on the success of the PBA initiative, and will maintain its goal to obligate 60% of the FY07 Environmental Restoration, Army (ER,A) funding on PBA.

3. The Army continues to pursue efficient, cost effective, technically sound, and results-oriented environmental remediation strategies as directed in Reference 1a, and reiterated in Reference 1b. In addition to the continuing implementation of PBA for Installation Restoration Program (IRP) sites, the Army is including Military Munitions Response Program (MMRP) and Compliance-Related Cleanup sites, where appropriate.

4. The US Army Environmental Command (USAEC) will continue to lead the PBA initiative and technical effort in coordination with the installations to establish implementation teams for the identified candidates. Implementation teams will be composed of the Installation Restoration Program Manager, a representative from the installation's higher headquarters (if outside the Installation Management Command), USAEC Restoration Manager, and the Technical Project Representative(s) (i.e., US Army Corps of Engineers and/or installation technical staff member), and assisted by the USAEC PBA Program Manager and support staff.

DAIM-ZA

SUBJECT: Performance-Based Acquisitions (PBA) Candidates

5. In FY06, the Army obligated 55% of the ER,A program through PBA, exceeding the FY05 rate of 50.2%. The FY07 goal is to obligate 60% of the ER,A program on PBA. Through the end of FY06, the Army has obligated approximately \$594M on PBA since the inception of this initiative. A total of 52 performance-based acquisitions were awarded to address approximately \$868M in cleanup requirements. This equates to a 33.5% cost avoidance when compared to the Cost-to-Complete estimates.

6. I encourage installations to embrace this initiative and to maximize the use of these sound acquisition principles whenever possible.
